## Recommended Use of Touch up Paint

**Touch up paint does not carry the warranty of our factory applied paint systems.**

### **Incidental Scratches:**

**Brush applied touch up paint should be used on all incidental scratches that expose the steel beneath the factory applied paint system. This touch up paint is available in bottles with brush applicators.**

**This paint should be used sparingly and only applied to the width of the scratch. Since this is a quick air dry material it will chalk and fade much faster than the factory applied system.**

**If areas larger than scratches need to be covered, the area will have to be primed and painted with paint that is available from a reputable paint manufacturer and matched to the color of the metal.**
